

TOP FILTRATION EUROPE

Topfiltration by-pass filter units use the radial filter principle and are available in 2 different capacities. The solution to contamination problems which cause more than 80% of all oil malfunctions and component defects. Top Oil reduces down time, maintenance interval and increases the lube oil life substantial.

Advantages of engine oil micro-filtration with TOP-OIL

- . Removal of solids down to a size of 0,5 µm
- . Slower change in TBN values
- . Additives are neither affected nor removed
- . Slower oxidation
- . Condensate is buffered in the filter element
- . No negative effects on viscosity
- . Large filter surface, i.e. high dirt absorption capacity

Partnumber	Filter	Flow diameter x height	Motor oilvolume ltr	Working pres. bar	Partnumber	Elementnumber	Flow ltr/min
10-G08	G08	90 x 248	8-10	6	12-P08-X	PO8X	0,5
10-G26	G26	90 x 135	>35	6	12-P26-X	P26X	0,8
